

DataTrack's Biomechanical Projections vs. Racing Performance Saratoga Select Sales 2012-2015

Beginning in 2012, DataTrack expanded its biomechanical and Cardio Score services at the Saratoga Select Sales by creating Master Lists of all those yearlings which clients asked us to analyze plus our selection of yearlings based strictly on conformation-to-the-eye.

Regardless of how the yearlings got on the list, each one which was analyzed was given a Racing Grade and Cardio Grade. These Grades reflect DataTrack's projections of what quality one would expect from that yearling as a racehorse if all things went well after the horse was put into training.

Horses which are graded A, B+ or B are those we consider most likely to succeed as racehorses at the highest levels.

Horses which are rated C+ are those which we feel are capable of earning black type at any level given favorable circumstances.

Horses which were graded either C or D are ones we strongly recommend be passed by.

We looked at these projections for the sales through 2015 (youngest now three years old) and race records were compiled through July 20, 2017.

On the left are the percentages of all stakes horses according to the grades assigned at the sales. Note that the stakes won by C & D grade horses were Listed or Restricted, and the Graded stakes placers in that group were well beaten.

American Pharoah, Songbird and Tapwrit were selected by DataTrack to be analyzed and all earned high grades.

(continued next page)

Of the horses on the list, 42% were rated A, B+ or B, 16% were rated C+, and 42% were rated C or D.

It may be surprising that just as many horses were rated unacceptable as those rated Best in Sale, but that is why DataTrack's services are in demand—sometimes the algorithm is much sharper than the eye.
